

Storm Prediction Center

Convective Outlook for **Thursday**

Courtesy of www.spc.noaa.gov

- Slight Risk (15% probability)
 - Scattered severe storm possible
 - 1 or 2 tornadoes, wind damage, 1" hail
- Enhanced Risk (30% probability)
 - Numerous severe storms possible
 - A few tornadoes, several reports of wind damage, 1-2" hail

* NWS defines a severe thunderstorm as measured wind gusts to at least 58 mph, and/or hail to at least one inch in diameter, and/or a tornado.

Significant severe weather refers to a threat of wind gusts to at least 75 mph, and/or hail at least two inches in diameter, and/or tornadoes EF2 or higher. All thunderstorm categories imply lightning and the potential for flooding. Categories are also tied to the probability of a severe weather event within 25 miles of your location.
